

LC. AMBER GLOW

(Lc. Derna × Lc. Anne Walker)

LC. AMBER GLOW, var. Rivermont, A.M., AOS
October 25, 1952

LC. AMBER GLOW, var. Rivermont, A.M., AOS
October 15, 1954

LC. AMBER GLOW, var. Signal Mountain, A.M., AOS
August 24, 1955

This outstanding hybrid was flowered in 1952. Comments by discriminating orchid growers, Stateside and abroad, have been that LC. AMBER GLOW is the most promising exhibitional yellow that has appeared during the past fifty years.

The addition of this cross to your collection should provide a source of pride and pleasure in owning the best. The color of the sepals and petals is usually a clear golden yellow with a striking scarlet labellum. The flowers, of very heavy substance, have a spread ranging from 5" to 6".

Well established, vigorously growing seedlings

1½" Pots, \$2.50 each
